

QUANN SECURITY ADVISORY

Leverage expert guidance to strengthen security from the perspective of policy, practice and technology

Security policies and practices have to be reviewed regularly to ensure that they continue to be relevant and are aligned with the latest developments in the cybersecurity landscape. However, many organisations do not have the resources and expertise to do this on a continuous basis. They may also have unique business requirements with customised functions and systems that are not adequately covered by standard security offerings. These may result in blind spots that expose the organisation's vulnerabilities and leave it open to potential attacks.

QUANN SECURITY ADVISORY

Quann Security Advisory provides organisations with the expertise to identify and address security gaps, and helps set up effective policy frameworks that will ensure continued vigilance against threats. This includes helping to develop standards and

policies, conducting reviews of existing security measures, hardening operating systems and networks, and even designing and building Security Operations Centres. We also offer bespoke security services for businesses with unique security needs.

SERVICES

LTE Security Review

- The aggressive rollout of IP-based LTE networks presents a potential security risk as cybercriminals start to target the telecommunications infrastructure.
- With our specialist knowledge of the telecom sector, Quann is well-positioned to help telcos manage these risks through a comprehensive LTE Security Review.

Standards, Policy Design and Review

- Quann's security experts can help design IT security policies and procedures to ensure that your organisation's systems and data are well protected.

- We will review, update and improve your existing security implementation policies, plans and procedures.
- Regular follow-up reviews will also be introduced to ensure that existing policies are implemented and enforced.

Security Operations Centre Design and Build

- Quann has more than 15 years of experience in designing, building and operating Security Operations Centres (SOCs).
- We have the expertise to design, build and operate SOC's to meet the needs of organisations from different industries.

Operating Systems and Network Hardening

- Quann provides expertise to assist in the “hardening” of operating systems, applications and networks.
- This helps close security gaps, especially in systems that have been designed for functionality rather than security.
- Hardening can be performed against standards such as the DISA Security Technical Implementation Guides, Instruction Manual 8 or In-House Security Readiness Review scripts.

Bespoke Security Services

- We offer customised consultancy and advisory services to meet the unique security needs of organisations with highly-specialised needs.

BENEFITS

Receive expert guidance from leading security specialists

Quann’s security experts have well over a decade of experience and extensive knowledge in advising businesses and governments on their security requirements. Backed by our proven methodologies, we propose solutions and make recommendations that are closely aligned with your business goals and regulatory requirements.

Keep up-to-date on your security posture

It is important for organisations to receive constant updates on their security posture and the cybersecurity risks in the business environment that they operate in, to manage vulnerabilities and threats more effectively. Quann assists you in this regard by providing insights into current business risks and vulnerabilities and the overall trends in the security landscape.

Stay focused on your business without being distracted by security concerns

Partnering Quann will give you the assurance that your organisation’s security needs are well taken care of. You can leave your security concerns to us while you focus on core business functions that impact top-line growth.
